EDUCATION

Temple University – College of Science and Technology, Fox School of Business

Bachelor of Science | Major: Data Science | Minor: Economics | GPA: 3.93

May 2028

- Concentration: Genomics and Bioinformatics

Honors and Awards: Sullivan Honors College, Fox Honors, Dean's List (Fall 2025, Spring 2026), Kode with Klossy Future Funds Fellow 2026, Fox Sales Competition Runner Up 2025, Trumark Financial Difference Makers Scholarship 2025

TECHNICAL SKILLS

Languages: Python, SQL, Java, HTML/CSS, C, C++

Tools/Skills: Pandas, Scikit-Learn, PyTorch, NumPy, Microsoft Excel, Word

EXPERIENCE

Undergraduate Research Assistant – Temple University | Liberles Lab

September 2026 – Present

- Investigate evolutionary dynamics of bacterial and eukaryotic operons through computational modeling approach, developing simulation methods to study selection and mutation pressures on gene clustering and recombination
- Built a forward Wright-Fisher genetics simulator in Python, modeling frequency changes over 50 generations
- Communicate simulation methodology and translate population genetics theory into actionable findings

Undergraduate Research Assistant – Lewis Katz School of Medicine | Wu Lab

May 2026 – Present

- Identify inflammatory pathways linked to metabolic disorders, analyzing multi-omics datasets spanning 200+ gene expression profiles across 3 disease cohorts in Python, generating new hypotheses for follow-up experiments
- Determine disease-related biomarkers by systemizing therapeutics targeting large androgen expression populations and analyzing 100+ mouse serum and liver expression datasets, resulting in 40 biomarkers for further validation
- Streamline Python and Ingenuity Pathway Analysis (IPA) workflows to evaluate bile acid signaling and networks

Instructor Assistant - Kode with Klossy

March 2026 – August 2026

- Facilitated learning for 70+ students in the AI/ML and Data Structures curriculum by teaching Python, Hugging Face, and NLP through live coding session and generative models, achieving 95% successful chatbot creation rate
- Managed machine learning chatbot projects for 15 scholar groups by providing technical guidance and debugging support throughout the development cycle, ensuring on-time, successful project delivery and engagement
- Documented solutions to workflow and dataset management to improve efficiency and minimize disruptions

PROJECTS

Fold Your Name | NFC Hardware + Web App | github.com/jyotikadiyala/fold-your-name

September 2026

- Engineered an NFC-triggered web application that transforms recruiter names into predicted protein structures, by building a Python/FastAPI backend integrated with the ESMFold API for real-time 3D structure prediction
- Developed a wearable hardware display system for real-time protein visualization as an interactive cyberdeck hairclip, by programming a ESP32-S3 to render live folding results, reducing setup complexity by 20%
- Presented an end-to-end hardware/software demo at Temple's career fair, engaging 20 recruiters over 2 hours

Diabetes Risk Prediction | Personal Project | github.com/jyotikadiyala/diabetes-risk-prediction

August 2026

- Built a predictive classification model for diabetes risk by training a Random Forest algorithm in scikit-learn on an 80/20 train-test split (614 vs. 154 patients), reaching 74.7% accuracy on unseen data alongside data processing
- Uncovered key healthcare trends, identifying glucose (26.3%) and BMI (16.4%) as the top predictors of diabetes

LEADERSHIP & PROFESSIONAL DEVELOPMENT

• **Kode with Klossy** | Future Fund Fellow | *Selected fellow in a four-year residency*

May 2026 - Present

• **Professional Sales Organization** | Director of Recruitment | *Lead recruitment strategy*

December 2025 –Present

• **Temple University** | Owl Ambassador | *Represent R1 institution to prospective students*

October 2025 –Present

Interests: Substack Author, Geocaching, Magazine Collecting, Sudoku, Bouldering
